  - analysis of test requirements
  - preparation and refinement of Test Cases
- Creation and maintenance of automated tests with SAP's tool eCATT
- Split of Test Cases in parts that are applicable for automated testing
- Evaluation of test results
- Test planning and coordination of testing projects within a Scrum team
- Assisting in the development of quality standards regarding testing process and its monitoring
- Participation in Quality Management activities to ensure the specified quality and process standards.

### What do I need to qualify for this job?

- Several years of experience in software development and software testing

- Experience with test methodologies
- Experience with SAP systems
- Experience with the eCATT tool is a plus
- Good knowledge of software development methodologies
- Experience working in a Scrum setup is desired
- Clinical and SAP knowhow are considered an advantage
- Initiative, analytical skills, result orientation, organizational skills, focus on quality
- Communication skills, team spirit and self-motivated
- Advanced English, written and spoken
- German knowhow is a big advantage

## **Benefits**

- Attractive compensation package and work climate
- Meal tickets
- Yearly bonus system
- Private health and life insurance
- Private pension
- Flexible schedule and work from home policy
- Personal and professional development
